Personality

I am a hardworking and self-motivated Computer Science student with excellent communication skills. I enjoy solving complex problems, learning emerging technologies, and working collaboratively in teams. With a passion for innovation, I aim to leverage technology to solve real-world problems and create meaningful impact.

Education

SASTRA Deemed University

Oct 2022 – May 2026

B.Tech in Computer Science and Engineering

- CGPA: 9.19/10

Sri Chaitanya Junior College, Vijayawada, Andhra Pradesh

July 2020 – June 2022

- Intermediate: 97.3%
- JEE Mains Percentile: 95.07%

Experience

Software Engineer Intern – Mphasis Limited

Jan 2026 – Apr 2026

- Developed a production-grade microservices banking platform using **Spring Boot (Java)**, comprising four independently deployable services: Auth, Account, Transaction, and Admin.
- Implemented **JWT-based authentication** with **TOTP MFA**, secure password recovery, and role-based access control isolating admin and regular user flows.
- Designed inter-service communication for deposits, withdrawals, and external transfers with double-factor account validation (Account Number + IFSC Code).
- Built a dedicated Admin microservice for auditing – enabling administrators to view user portfolios, account directories, and full transaction ledgers for compliance.

Projects

Aegis Capital – Microservices Banking System

- Built a production-grade microservices banking platform using **Spring Boot (Java)** with four services (Auth, Account, Transaction, Admin), orchestrated via **Docker Compose**.
- Implemented **JWT (HS256) + TOTP MFA** authentication, **BCrypt** password hashing, and CORS-restricted APIs across all services for end-to-end security.
- Engineered a **Simplified Orchestration Saga Pattern** in the Transaction Service with compensating rollbacks to ensure atomicity across distributed service boundaries.
- Applied **JPA optimistic locking (@Version)** for concurrent balance updates and native @Modifying queries to bypass first-level cache for PIN resets.
- Implemented double-factor external transfer validation (Account Number + IFSC) via dedicated internal endpoints, preventing misdirected fund transfers.

PySpark Data Cleaning Pipeline

- Built a production-ready, modular data cleaning pipeline using **PySpark** on **Databricks**. Designed for messy real-world CSVs with automated schema detection, flexible cleaning strategies, and scalable transformation logging.
- Handled **missing values** with configurable strategies: drop, mean, median, or mode.
- Performed robust **data type casting** and **duplicate row removal** at scale.
- Implemented optional **IQR-based outlier detection** and transformation logging.
- Enabled user-friendly input/output configuration via **Databricks widgets**, supporting Delta and Parquet formats.

Skills

- **Programming Languages:** C++, Python, Java
- **Frameworks & Libraries:** ReactJS, Node.js, Spring Boot
- **Computer Fundamentals:** OOPS, DBMS, OS
- **Databases:** SQL, MongoDB
- **DevOps & Tools:** Docker, Docker Compose
- **Other Skills:** Machine Learning, Data Structures and Algorithms

Achievements

- Secured **AIR 5005** with a score of **543** in **GATE 2025**.
